## Where is the menu button on the samsung smart tv remote

If you've ever felt like programming a television remote was an impossible task, you aren't alone. From searching for all TV remote codes to finally picking the right one, remote key programming can feel like a nonstarter. However, with this quick guide, you'll learn how to program your remote quickly. What Is a Universal Remote? For some people, the universal remote might be the best invention ever. While you used to have to buy the precise remote for your television or DVD player, these remotes let you control all your electronics from the same remote. Other benefits include backlit displays included on most models and the compatibility with many electronic devices. Some of today's remotes can be described as "smart remotes," that control everything from your television to the thermostat. Programming Basics Although the exact steps you need to take to program your remote may differ from model to model and brand to brand, the basics typically remain the same. The basic steps to program a remote without the codes include the following: Turn the television on Press the button on the remote labeled for your television. Press the "TV" button until it lights up and stays lit. Point your remote toward the television and press the power button until the television turns off. Press "Enter" on the remote and the light should go off. The remote is now programmed and ready to use with your television. Finding Remote Codes If you can find the code to sync your remote with your television, the programming process should be even easier. If you have the packaging or the instruction manual that came with your remote, you'll have a list of all TV remote codes at the ready. If you don't, note the brand and model of your TV and visit the manufacturer's website. Remote Key Programming Pitfalls There are two main troubles that you may encounter when you program your remote: not using the exact model's code and not being on the right frequency. If you input the code for a model that's close but not exact, some functions may work while others could fail. Likewise, you should make sure your device's settings are the same frequency your remote sends. Components typically operate on infrared (IR) or radio frequency (RF). Troubleshooting For many remote users, two main problems seem to arise: the remote not working correctly and random devices turning on seemingly by themselves. If you're working with an IR remote, it requires a clear line of sight to communicate with your television. If your remote isn't working, the odds are pretty good that you need to keep the remote pointed at the TV until it receives all the commands. If you notice random devices turning on or off after pressing a command into your remote, then you may have what Yahoo! calls gremlins. This is a conflict caused by HDMI CEC. Turn off HDMI CEC in your television and home theater settings and you should be good to go. MORE FROM QUESTIONS ANSWERED.NET Where is the Samsung TV's home button?
